- 4 temperatures: from 150-210 °C with a 20°C interval
- Heat-up time: 90 seconds to reach 150 °C
- Heat insulation function for extra ease and safety
- Curl ready timer
- Memory of last used temperature
- LED temperature indicators
- 30 minutes automatic shutdown function
- PTC heating
- Voltage: AC 220-240V, 50-60Hz 33W
- 360° swivel cord with hang loop, 2m

EAN: 8712856064007

Curling made easy!
Curling your hair can be quite a task with a standard curling device; it takes time, practice and skills to get the perfect curl. That's why Silk'n presents Silk'n AutoTwist: an automatic curling system that does the job for you in just seconds! With its 3D Smart Curling Technology your locks are wrapped around the ceramic-tourmaline barrel automatically, whilst frizz or damage is prevented. The ideal temperature is ensured by the insulation function that confines heat within the curling chamber. Also, different hairstyles and a natural finish can be achieved by alternating curl directions and temperatures. Lastly, its double-layered open design and smart timers secure that styling happens in a safe way. The result? Curly celeb looks that bounce, shine, and last all day!

3D Smart Curling Technology
With the 3D Smart Curling Technology there is no way you will have bad hair days! This genius technology facilitates, protects and adds moisture and shine to your hair, generating long-lasting results for all hair types. It consists of auto-rotation, tourmaline and ions that work together to provide you with salon perfect hair at a glance. The auto-rotation function enables your hair to be drawn into the curling chamber automatically, where it is gently held and heated from all directions to deliver flawless curls or waves. The ultra-smooth tourmaline coated barrel prevents your hair from getting caught, knotted or damaged by hot spots. Moreover, the ion technology ensures an anti-static effect by producing negative ions, which make even the most dry or damaged hair become frizz-free, silky and shiny. The hair's natural oils stay preserved as moisture is sealed in and the hair follicle is closed upon contact. So bye bye frizz, hello shiny curls!

The ultimate curling experience
Silk'n AutoTwist is equipped with countless easy to use features. To start off, you can choose from 4 different temperature settings from 150 to 210 °C, so you can select the right temperature for your hair type, whether fine, thick, or other. You can also choose from 2 curling directions - left or right - to curl your hair inwards or outwards for an old glamourous Hollywood look or a relaxed beach wave look. The curl ready timer will signal you to let you know that your curl is ready. And if you liked the temperature you used, the temperature memory function will remember it for you for your next hairstyling session.

Safety is key
With Silk'n AutoTwist you do not have to be afraid that your hair gets tangled or burned, as it has a lot of safety features. First, the open design promotes stress-free styling sessions. Secondly, the ultra-smooth tourmaline barrel allows your hair to glide around it without any kinks. Besides, your hair cannot get fried as the curl ready timer lets you know when it's time to release your locks.

Another clever safety feature is the Heat insulation function; the double-layered heat protective housing keeps heat insulated in the chamber to maintain the ideal temperature and provide extra safety. This feature also ensures that the outside of the device stays cool thus protecting you from burns. The same goes for the cool tip on the barrel, which enables you to hold it while styling.

Furthermore, Silk'n AutoTwist features PTC (Positive Temperature Coefficient) heating. This type of heating generates fast and energy-efficient heat transfer, enabling the device to reach a temperature of 150 °C in 90 seconds and 210 °C in 4-5 minutes. It also ensures that the device cools down quickly, preventing overheating and guaranteeing higher safety levels.

Finally, the automatic shutdown function provides extra safety as it automatically turns off the device after 30 minutes.

Specifications

Use for	Curls fast and automatically, no frizz, no damage, adds shine
Suitable for hair type	All hair types
Technology	3D Smart Curling Technology: auto rotation, tourmaline, and ions
Maximum temperature	210°C
Minimum temperature	150°C
Warm-up time	90 seconds
Overheating protection	Yes
PTC heating plates	Yes
Temperature levels	4
Automatic shutdown	Yes
Automatic shutdown time	30 minutes
360°C swivel cord	Yes
Hanging loop	Yes
Cord length	2 m
Power consumption	33W
Input voltage	220 - 240 V / 50-60 Hz
Dimensions (lxwxh)	300 x 68 x 68 mm
Package contents	1x AutoTwist device 1x user manual
EAN	8712856064007
