Delock Experimental Mini Breadboard 170 contacts white

Description

This experimental breadboard by Delock enables a fast solderless assembly of small electronic circuits. The circuit can be changed by simply repositioning the components.

To be used for various applications
This breadboard is suitable for e.g. Arduino shield prototyping, switching tests and various PCB projects.

Compatible with various components
For example, transistors, diodes, LEDs and capacitors can be mounted.

Ideal for test setups
The breadboards are often used in the hobby sector, in the laboratory, in industry and also at schools or universities, as the assembly is quick and no soldering is necessary.

Simple application
The experimental breadboards have an adhesive sticker on the bottom side, to mount it easily to any smooth surface and removed without leaving any residue. Optionally, the breadboards can also be fastened with two screws.

Specification

- Terminal strip: 170 contacts
- self-adhesive
- Material: plastic
- Colour: white
- Dimensions (LxWxH): ca. 46 x 36 x 10 mm

Item no. 18316

EAN: 4043619183166

Country of origin: Taiwan, Republic of China

Package: • White Box

Package content

- Experimental breadboard
- 2 x screw
